

Automotive Technician Training

Welcome

Computer based training is the future for colleges and high schools. Here at **ATT** we are already working with hundreds of schools and colleges, and making their difficult job easier. Our training solution for automotive is the answer to your problems.

Features and benefits

- Multimedia learning screens with voiceover of all training text
- Linked to NATEF standards
- Prep time reduced or eliminated
- Self-learning or instructor led individualized curriculum
- Assignments and self-assessments
- Multiple-choice questions linked to the learning
- Comprehensive task list coverage
- Animations, videos, voiceover, activities
- Online access also available
- Hard copy books available – or print them FREE from the DVD
- Annual updates available
- Master copy supplied – no limit on number of copies you can make!

- 1. Brakes**
- 2. Electrical/Electronic Systems**
- 3. Engine Performance**
- 4. Suspension and Steering**
- 5. Automatic Transmission and Transaxle**
- 6. Engine Repair**
- 7. Heating and Air Conditioning**
- 8. Manual Drive Train and Axles**

Units 1 to 4 and 5 to 8 are presented as different packages and may be purchased separately.

Learning

The learning material covers all aspects necessary for certification. The material is split into the usual eight units, which are each divided into topics and smaller sections. This allows the material to be studied in bite sized pieces and in any order.

The material includes over 1500 multiple-choice questions. These allow ongoing practice and assessment, and are an ideal preparation for formal tests. Further, when students answer incorrectly, they are automatically directed back to the learning material specific to the questions they get wrong.

A glossary and 'toolbox' are also included to further enhance this comprehensive product. Interactive (learning) activities are included after every 4 or 5 learning screens to reinforce learning and make it more fun.

Online Access

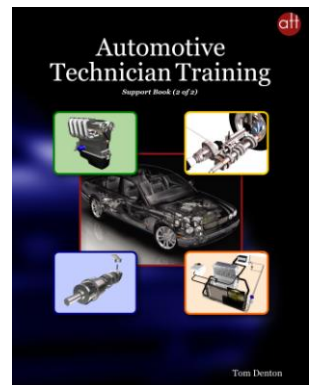

All the learning material is also supplied online. A very small additional fee is payable for each online access account.

Books

Textbooks/Workbooks may be purchased for each student or they can be printed **free** from the disks.

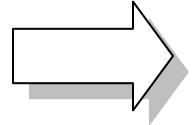

The textbooks match the multimedia learning material and include self assessment questions, activities and other learning tasks.

Support books that include task list worksheets, assignments and glossaries (in English and Spanish) may also be purchased or printed **free** from the disks (the support book material may even be edited if you wish).

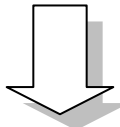

Start Here! – Six simple steps...

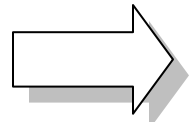

1. Ideally, run the training video first – but if short on time – follow these steps. Insert the disk or USB in the drive and it will autorun. Double-click ATTTtraining###.exe if not.

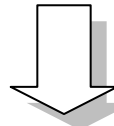

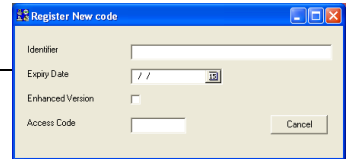

4. Ensure the speakers are on as all the screens have voiceover. The 'T' button shows the text, the 'L' button shows labels and the bottom left buttons select images or control a video (when used).

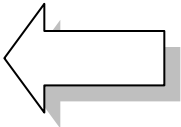

5. Try out the buttons on the interface. 'Annotate' only works when a learning screen is showing. Click the 'Books & Support' button to open a folder that contains the textbooks and support files!

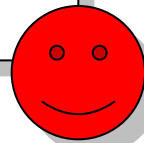

2. If requested, enter the login codes from the certificate in the package or those emailed to you.

3. Click one of the unit buttons on the main screen area to access the contents. Click again to select the area of interest until a learning screen runs.

6. The 'Quiz' button on the interface is active when in the menu. The questions shown will relate to the currently selected area i.e. all units, one unit, or one part of a unit. **Enjoy!**

What is in each pack?

- DVD with computer based learning covering **four** units
- Training CD for instructors
- Color textbook
- Task list support book
- Operating manual
- Training documents (on the disk)
- Five-year site license
- Network installation option

How is it paid for?

Simple! An **unlimited site** license for each pack (covering **four** units) is available.

Or...

For all **eight** units (both packs) get FREE diesel content AND save \$\$\$\$!
Remember, there is **no restriction** on the numbers of users, as long as they are enrolled students or employed staff.

ATT Author: Tom Denton

Member of the SAE and former head of a large automotive training college, Tom is now a leading automotive author. Two of his many publications to date are: Automobile Electrical & Electronic Systems and Advanced Automotive Fault Diagnosis.

FAQs

Where do I start!?

Run the Demo/Training CD if time allows (30 minutes) – if not see the Start Here! Guide on page 4.

What does each package cover?

There are **two** packages, each containing four units:

1. Brakes, Steering & Suspension, Electrical/Electronic, Engine Performance.
2. Engine Repair, Heating and Air Conditioning, Manual Drive Train, Automatic Transmission and Transaxle

What does each package contain?

Each of the two ATT packages contains a DVD, textbook, support book, training CD and a guide/help booklet. Additional hard copy books (in color or B&W) are available, and recommended, but they can also be printed from the DVD if preferred.

How do I login?

When the program first runs on a new computer a login box is shown. Enter your Identifier (ID) and the Expiry date, tick the Enhanced box, and then enter the Access Code (key). A certificate is included in the package with all this information on it. The Logon box will disappear as soon as the correct code is entered. This procedure will need to be repeated on each machine when the program is first run. If you need to change the logon details at any time, start the program as normal and then press <ctrl> + <alt> + <k> together to show the logon box.

Network managers can enter the code centrally to prevent the login request on remote machines. To do this, create a file named *reg.inf* using Notepad, so that the first line contains the Identifier and the second line the Access code. Save this in the root folder.

The codes are changed annually.

Are there any installation requirements?

The material will run directly from the learning DVDs. However, it is better if networked or copied to a hard disk. If installing on the hard drive or a network, simply create a folder and copy **all** the DVD contents into it. Create a short cut to the *ATTTraining###.exe* program and that's it!

No other setup is required other than having Adobe/Flash player 8+ and Adobe Reader 6+ installed. If required, these setup programs are supplied on the disk.

What are the PC specifications?

The minimum system requirements for a Windows-based PC are:

- Pentium 200 processor
- Microsoft Windows 98, ME, NT4, 2000, XP or Vista
- 64MB of memory minimum
- DVD drive

- 10 MB of free disk space (3GB if installed)
- Color monitor with at least 64k colors (800 x 600 min) 1024 x 768 is best

Is technical support available?

If you experience technical difficulties with this product, you can send a message to support@attraining.com

What are the ACCESS and ENROLMENT codes for?

The DVD material will not run without entering an ID, date and unlock code. This is to prevent the disks being pirated! As a registered user if at any time you need a reminder or an updated code then just email and it will be sent to you by return. The enrolment key allows you and your students to access the online material. This key changes regularly to prevent unauthorized use but once enrolled then a new key is not needed.

Can the ATT material be supplied for our college/company VLE/LMS?

Yes! An additional charge is made for this – please email for details.

What are the license restrictions?

The license requirements are simple: Colleges, Schools or Training Companies may copy **any** part of the material for **any** number of students as long as it is for normal educational use by enrolled students and employed or contracted staff on the agreed site.

How is the material structured?

Each of the main units is structured in the same way:

- Safety, tools, equipment and customer care
- Theory and technology
- Service and repair
- Fault diagnosis

The order of the material in the theory and practical sections is set out as a teaching plan or a scheme of work – so, start at the top and work through all the sections in turn! A Word document of the structure is available on the DVD or online.

Can we get updates?

Yes! The online material is being updated all the time. Updated DVDs can be supplied to you when available (usually one per year). An additional charge is made for the updated DVDs.

How do I access the online material?

ATT is available on line (for registered users) for a very small additional per user cost each year.

When your college or company purchases the online option, a special ENROLMENT key (emailed to you) will allow you and your students to access this area without any further payment.

What EXACTLY does ATT contain?

- 4500 multimedia learning screens
- 1500 multiple-choice questions
- 40 assignments
- 300 task list worksheets
- 8 task list cross references
- 5 support documents
- 2500 English and Spanish glossary entries
- And more!

Do I have to use things like the lesson and curriculum plans?

No! Use ATT in whatever way helps the most – the additional material is intended to support you as you become more familiar with the package.

Does the material cover everything required by the standards?

The DVD and online material includes:

- Thousands of multimedia learning screens and learning activities
- Multiple-choice quizzes (There are over 1500 questions, ideally used on screen, or they can be printed out by Instructors)
- Glossaries (huge electronic automotive glossaries in English **and** Spanish)
- Tools and equipment reference (like a picture dictionary)
- Practical task worksheets linked to the task list
- Assignments

The textbook (better thought of as a workbook) matches the computer-based material exactly; it can be printed from the DVD or purchased separately. The book includes self-assessment questions, tasks, labels to complete, bullet points and more, to improve learning.

An additional support book includes task list cross references, hundreds of practical task sheets and assignments as well as the English and Spanish glossaries in printed format (this book can also be printed from the DVD or purchased separately).

So, it would never be right to say 100% coverage – but it is close!

Is the material for self-learning or is it Instructor led?

The material is designed for use by the Instructor in the classroom **or** by a student working on their own – self-study may need to be directed by the Instructor of course! Using ATT on screen in the classroom greatly reduces instructor prep time and helps guide the curriculum.

Self-learning is made easy because of features such as the glossary, equipment list, activities screens and textbook interaction.

Is there a suggested curriculum?

The theory and practical sections are presented in a suitable order to use as a scheme of work / curriculum plan – just start at the top and work through to the end! (Word versions of the structure are on the DVD). All this is of course entirely optional – use the material in the way that works best for you.

How should lessons be run?

The simple answer to this is: How ever it works best for you and your students! But, the package does contain a generic lesson plan. This is linked to the ATT material and is included on the DVD as an 'active' Word document (meaning that adjustments are easy to make).

Does ATT include a suggested task list?

Yes! However, this is intended to help with your own list and not necessarily replace it. The ATT task list is a series of worksheets that can be printed or bought as a support book. A Repair Order example is available that can be used in conjunction with the worksheets. Edit this to meet your specific requirements.

A cross reference table is included with each unit (in the support book) that shows how the NATEF requirements are met by the built-in worksheets.

How do I order the ATT package?

Complete the attached order form – include a check or official company order and the package will be with you ASAP.

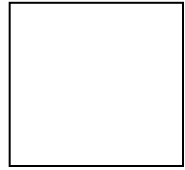

How do I get more help or ask questions?

Email is usually the best option:

alan.church@atttraining.com or tom.denton@atttraining.com
